

**IS FLUORIDATED WATER TOXIC TO US?
THIS MAP OFFERS INFORMATION AND LINKS
TO BEGIN YOUR STUDY OF THE ISSUE.**

FLUORIDE ADVERSE EFFECTS

- Bone and joint pain
- Cancer risk increased
- Interferes with brain functions
- Kidney disease
- Diabetes risk increased
- Dental fluorosis
- Gastric distress
- Skin rashes
- Male infertility
- Interferes with pineal, thyroid
- Low IQ in children, ADHD
- Increased risk of bone fracture

**Pharmaceuticals
with
fluorine, fluoride:**

- Anaesthetics
- Antiacids
- Anti-anxiety
- Antibiotics
- Anti-depressants
- Antihistamines
- Anti-fungal antibiotics
- Antilipemics
- Anti-malarials
- Antimetabolites
- Appetite suppressants
- Psychotropics
- Steroids

★ FLUORIDE NEWS TRACKER

FLUORIDE GATE

Most countries in the world do not fluoridate.

Fluoride accumulates in the human pineal gland.

Fluoride destabilizes DNA by affecting bonds.

Fluoride is very biologically active. It interferes with enzymes.

Fluoride is not essential. There is no known function for it in human body.

This is a one size fits all approach, which is not done in medicine anywhere.

Fluoride works topically, not internally.

Most people drinking fluoridated water in the world live in the United States.

Hydrofluorosilicic acid (an unpurified, mixed, industrial scrubbing solution) is the fluoride used in public water supplies, not sodium fluoride.

Only substance in the world added to water as a medicine. It is an unapproved drug, unregulated by the FDA.

Organizations

SOURCES OF FLUORIDE

- Public water supplies
- Fluorinated pharmaceuticals
- Industrial emissions, workplace
- Fluoride pesticides, esp. on grapes
- Toothpaste, dental treatments
- Mechanically deboned meat, esp. chicken
