

What happens when genetic material is shifted from one species to another? How is it done? What are the goals? Is it successful? Is it predictable? What are the consequences? Are they permanent?

This map offers the smallest overview and introduction to the subject of genetic modification of organisms. But following the links will convince you that caution is advised.

## COMMON GMO FOODS

- Sugar beets
- Papaya
- Potatoes
- Corn
- Tomatoes
- Squash
- Golden rice
- Soybeans
- Canola
- Alfalfa
- Salmon

## GMO TERMS

- GMO
- rDNA
- Biotechnology
- Recombinant DNA
- Genetic engineering
- Genetic modification

## REPORTED HEALTH EFFECTS IN TEST ANIMALS, PEOPLE

- Increased allergies
- G-I flora altered
- Cancer risk increased
- Reproductive problems
- Infant mortality increased
- Altered immune systems
- Damaged stomach lining
- Antibiotic resistant diseases
- Increased sensitivity to toxins
